Soft Skills

System Architecture
Scope Negotiation
Technical Mentorship
Cross-team Collaboration
Vendor Management
Stakeholder Communication
Code Review Leadership
Priority Management

Technical Skills

Backend: Java 21, Micronaut, jOOQ, Flyway, Maven

Frontend: React, TypeScript

Cloud: AWS (AppSync, Kinesis, SQS, RDS, SES)

Data: PostgreSQL, Datadog, NewRelic

Tools: Docker, CircleCI, LaunchDarkly, Snyk, Sendbird

Certifications

AI For Everyone

DeepLearning.ai

09/2025

AWS Cloud Practitioner

AWS

02/2022

Professional Experience

Staff Software Engineer

Equip Health | 02/2025 - Present

- Architect and deliver end-to-end features across 10+ Java microservices (Micronaut, jOOQ, Flyway) supporting clinical data capture workflows in a healthcare SaaS platform
- Drive real-time AI feature delivery using AWS AppSync and WebSockets, shipping an LLM-powered provider appointment summary tool from concept to production
- Build an LLM-powered developer tooling framework (Claude Code plugins) adopted org-wide, automating Jira workflows, technical design generation, code review, and PR standards enforcement
- Lead company-wide security vulnerability remediation, reducing critical Snyk findings by 80%+ and unblocking the Java 21 platform upgrade across all backend services
- Spearhead observability migration from NewRelic to Datadog (agents, log traces, spans), saving the organization \$40k+ in error-driven operational costs
- Lead architecture and delivery of a real-time provider messaging platform (Sendbird), managing vendor technical relationship, delivering rapid POCs, and distributing system ownership across the team
- Define service boundaries, RESTful API contracts, and event-driven patterns (Kinesis pub/sub); drive shared library adoption (auth, feature flags, HTTP, exceptions) across all services
- Negotiate scope with Product leadership to deliver clinical data initiatives (baseline surveys, overdue nudges, discharge plans, and PHQ-9) under tight timelines, supporting 90%+ survey completion OKRs
- Mentor and onboard engineers across multiple teams into production-readiness, enforcing SOLID principles, transactional SQL, async threading, and testing patterns through daily cross-team code reviews

Senior Software Engineer

Equip Health | 09/2023 - 02/2025

- Design and document a company-wide asynchronous messaging architecture (Kinesis data streams) adopted as the standard for event-driven workflows across all backend services
- Lead critical Chat service stabilization and feature delivery (Emoji Reactions, channel management), reducing provider notification volume by 10% against company KPIs
- Initiate and lead Snyk dependency management and vulnerability remediation across legacy repositories, establishing security hygiene as a team standard
- Deliver full-stack features (Note Templates, Provider Team Assignments, Patient Shipping Address) across Java and React codebases under tight sprint deadlines
- Build application performance monitoring workflows using NewRelic, identifying security vulnerabilities and slow API endpoints before production impact
- Onboard and mentor 3+ engineers across teams, becoming the trusted code reviewer for offshore contractors and the go-to resource for cross-service debugging and architectural guidance

Education

BA in Computer Information Systems

BA in Information Technology Service Management

Missouri State University

09/2011 - 06/2015
